```cpp
// file_handling.cpp
#include <iostream>
#include <fstream>
#include <string>
using namespace std;

int main() {
    const string filename = "telephone.txt";
    // Write to file
    ofstream out(filename);
    if (!out) {
        cerr << "Cannot open file for writing\n";
        return 1;
    }
    out << "Name: Pranav, Phone: 9876543210\n";
    out << "Name: Aman, Phone: 9123456780\n";
    out.close();

    // Read from file
    ifstream in(filename);
    if (!in) {
        cerr << "Cannot open file for reading\n";
        return 1;
    }
    cout << "Contents of " << filename << ":\n";
    string line;
    while (getline(in, line)) {
        cout << line << "\n";
    }
    in.close();
    return 0;
}
```
